abhirajg67@gmail.com | +91-9440359944 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Detail-oriented and analytical Computer Science Engineer specializing in Data Science. Proven experience in data preprocessing, machine learning workflows, and data analysis. Adept at translating complex datasets into actionable project insights and building scalable ML pipelines. Strong collaborator with a track record of working alongside cross-functional technology teams to support data-driven decision-making.

TECHNICAL SKILLS

- **Languages & Core Skills:** Python, SQL, C++, Data Analysis, Data Preprocessing, Structured Information Organization
- **Machine Learning & AI:** Supervised/Unsupervised Learning, Deep Learning, Model Development, Data Prediction Techniques, Scikit-learn, PyTorch, TensorFlow
- **Data Visualization & Tools:** Matplotlib, Excel, Pandas, NumPy, ETL Pipelines, Git, Docker
- **Frameworks & Platforms:** Django, Flask, AWS, Azure, REST APIs

PROFESSIONAL EXPERIENCE

Ethara AI | LLM Post-Training Intern | *Jan 2026 – Present*

- **Data Analysis & Processing:** Analyzed large-scale project datasets and repository codebases to identify performance trends, generating insights to optimize AI execution efficiency.
- **Data Preprocessing & Quality:** Engineered and cleaned raw datasets utilizing AST-based stubbing and automated test generation to significantly improve data quality for machine learning applications.
- **Machine Learning Support:** Developed Dockerized benchmarking workflows and automated evaluation frameworks to test model development and data prediction techniques.
- **Project Collaboration:** Partnered closely with engineers, data analysts, and technology teams to deploy scalable parallel evaluation pipelines, ensuring alignment with industry best practices.

PROJECTS

Multi-Modal RAG Application

- Applied advanced machine learning concepts to design a multi-modal retrieval system, improving overall retrieval and data prediction accuracy by 22%.
- Cleaned raw datasets and structured information pipelines using vector search and transformer workflows to achieve sub-second latency.

Audio Deepfake Detection System

- Built a hybrid CNN-LSTM machine learning model achieving 91% accuracy on raw audio datasets.
- Performed feature engineering (MFCC and spectrogram features) to preprocess data, resolve noise issues, and enhance overall model quality.
- Utilized Python and Matplotlib to generate visual reports, mapping trend lines and data patterns to communicate project findings effectively.

EDUCATION

B.Tech in Computer Science (Specialization: Data Science)

Noida International University | CGPA: 7.85 | 2022 – 2026

- **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems (SQL), Applied Machine Learning, Data Analytics, Statistical Visualization.

PUBLICATIONS

- **"Adversarial Machine Learning for Security"** – Journal of Scientific and Industrial Advanced Research (JSIAR), Apr 2025.
